DMC QUALITY INSPECTED

Monitoring Industrial Contaminants Release to Russian Arctic Rivers
Analytical Laboratory Quality Assurance Report

I. BACKGROUND

Reports suggest that over 100 billion metric tons of mixed industrial wastes have been dumped or disposed of in the Northern and Arctic regions of the former Soviet Union in crude landfill facilities or directly into rivers. These materials were dumped in such a manner that they may have been transported to the Arctic ocean basin. Initial contaminant transport estimates from simple Russian physical hydrographic (circulation) models suggest transport across the Russian Arctic Ocean in 3-5 years. GERG has undertaken studies in two of the principal river systems transporting contaminants from large watersheds to the Arctic Ocean and Kara Seas, and has obtained samples of sediment and biota for analysis. In the current phase of the study, 20 surficial sediments down each of the axis of the Ob and Yenisey Rivers into the Kara Sea were analyzed for industrially derived trace organic compounds (hydrocarbons, pesticides, PCBs) and trace metals. Twenty sediments from the two rivers were subjected to high resolution GC/MS analysis for dioxins, furans and coplanar PCBs to determine the concentrations of these industrial pollutants. In addition, similar analyses were conducted on 10 tissue samples (fish and other invertebrate animals) down the axis of each river.

II. STANDARD OPERATING PROCEDURES

The PCB, Pesticide, Aliphatics and PAH analytes for samples listed in Table 1 (Tissues) and Table 2 (Sediments) were determined following extraction using gas chromatography with electron capture detection (GC/ECD), gas chromatography with flame ionization detection (GC/FID), and gas chromatography/mass spectrometry in the selective ion monitoring mode (GC/MS-SIM). Concentrations of the seventeen 2,3,7,8-substituted dioxin and furan isomers, and the three coplanar PCB isomers were determined by high resolution gas chromatography/high resolution mass spectrometry (HRGC/HRMS). Trace metals were determined after acid digestion followed by a combination on inductively coupled plasma (ICP), neutron activation, and atomic adsorption spectrometry. Mercury was determined using cold vapor techniques. All samples were analyzed under GERG's Quality Assurance Project Plan (QAPP) which includes analysis of duplicates, blanks, matrix spikes, and standard reference materials.

III. ANALYSIS of TISSUES for POLYNUCLEAR AROMATIC HYDROCARBONS, PESTICIDES and PCBs.

A. Extraction

Ten tissue samples were extracted as set M881 and analyzed for PAHs, pesticides and PCBs. The PAH surrogate recoveries fell below the required QC limits, and eight of the ten samples were re-extracted as set M1442 and re-analyzed. Two tissue samples from M881 (C11952 and C11954) had insufficient sample left for re-extraction. There are no PAH data reported for these two samples, and the associated data tables are flagged with "NA", not available. The pesticide/PCB analytes for these two samples are reported from the original extraction set M881. An additional ten tissue samples were extracted as set M959 and analyzed for PAHs, pesticides and PCBs.

B. Surrogate Recoveries

Of the twenty tissue samples reported, six had low recoveries for the surrogate d_{12} -perylene. d_{12} -Perylene is an advisory surrogate only and no corrective action was necessary.

One sample had high recovery of surrogate PCB198, and one sample had high recovery of surrogate PCB103. Because the other PCB surrogates in those two samples were within QC acceptance criteria, no corrective action was deemed necessary.

Matrix interference with the Internal Standard, TCMX, in sample C11951 caused excessively high recoveries for all three Pesticide/PCB surrogates. Those recoveries have been flagged with an "M". Analyte concentrations were not affected by the interference. Only one of the target Pesticide/PCB analytes (dieldrin) was detected in the sample at a concentration greater than three times the MDL.

Recoveries outside the QC acceptance criteria are flagged with a "Q" in the data tables.

C. Laboratory Blanks

Each of the three extraction sets included one Laboratory Blank (BLANK) sample. The associated sample numbers are Q6198 (set M881), Q9732 (set M1422), and Q7929 (set M959). None of the target analytes were detected in the Laboratory Blanks at concentrations greater than three times the Method Detection Limit (MDL).

D. Laboratory Duplicates

Each of the three extraction sets included one Laboratory Duplicate (DUP) sample. The associated sample numbers are Q6196/C11955 (set M881), Q9733/C11955 (set M1422), and Q7928/C13787 (set M959).

Duplicate analyses of sample Q7928/C13787 (set M959) had high Relative Percent Differences (RPDs) for benzo(e)pyrene (54%) and for perylene (80%). Duplicate analyses of sample Q9733/C11955 (set M1422) had a high RPD for PCB41/64 (71%). Otherwise, analytes with concentrations greater than three times the MDL had RPDs

within the QC acceptance criteria. RPDs outside the QC acceptance criteria are flagged with a "Q" in the data tables.

E. Matrix Spikes

Two of the three extraction sets included one Matrix Spike (MS) sample. The associated sample numbers are Q6199/C11955 (set M881) and Q9735/C11955 (set M1422).

Sample Q6199 (set M881) had an average percent recovery of 109% for the Pesticide/PCB analytes. Sample Q9735 (set M1422) had an average percent recovery of 96% for the PAH analytes and 108% for the Pesticide/PCB analytes. Individual analytes with recoveries outside the target range are flagged with a "Q" in the data tables.

F. Laboratory Blank Spikes

Each of the three extraction sets included one Laboratory Blank Spike (LBS) sample. The associated sample numbers are Q6197 (set M881), Q9734 (set M1422), and Q7930 (set M959).

Sample Q6197 (set M881) had an average percent recovery of 106% for the Pesticide/PCB analytes. Sample Q9734 (set M1422) had an average percent recovery of 102% for the PAH analytes and 109% for the Pesticide/PCB analytes. Sample Q7930 (set M959) had an average percent recovery of 90% for the PAH analytes and 86% for the Pesticide/PCB analytes.

Individual analytes with recoveries outside the target range are flagged with a "Q" in the data tables.

G. Analytical Difficulties

Other than the re-extraction of set M881 discussed above, no analytical difficulties were encountered with these analyses.

IV. ANALYSIS of SEDIMENTS for POLYNUCLEAR AROMATIC HYDROCARBONS, ALIPHATIC HYDROCARBONS, PESTICIDES and PCBs.

A. Extraction

A total of forty sediment samples were extracted in four analytical QC batches designated M748 (10 samples), M749 (10 samples), M2065 (9 samples) and M2075 (11 samples). No significant analytical difficulties were reported during the extraction procedures.

B. Surrogate Recoveries

Of the forty sediment samples reported, four had low recoveries for the surrogate d_{12} -perylene. d_{12} -Perylene is an advisory surrogate only and no corrective action was necessary. Three samples also had low recoveries for surrogate d_{12} -chrysene, however insufficient sample remained for re-extraction.

In three of the forty sediment samples all three Pesticide/PCB surrogates had high recoveries. Most target analytes were either not detected or were present at concentrations less than three times the MDL so no corrective action was deemed necessary.

In eight of the forty sediment samples the C30-alkane surrogate standard exceeded the QC acceptance criteria due to matrix interferences. Because of the limited availability of additional sample, corrective action was not initiated.

Recoveries outside the QC acceptance criteria are flagged with a "Q" in the data tables. An "M" in the data tables indicates matrix interferences that co-eluted with the affected analyte.

C. Laboratory Blanks

Each of the four extraction sets included one Laboratory Blank (BLANK) sample. The associated sample numbers are Q7069 (set M748), Q7074 (set M749), Q9003 (set M2065), and Q9084 (set M2075). Two extraction sets also included a sodium sulfate blank (NaSO₄ BLANK). The associated sample numbers are Q7068 (set M748) and Q7073 (set M749).

The C10-, C11-, and C12-alkanes were detected in sodium sulfate blank Q7068 at concentrations greater than three times the MDL. Otherwise, none of the target analytes were detected in the Laboratory Blanks or the sodium sulfate blanks at concentrations greater than three times the MDL.

D. Laboratory Duplicates

Each of the four extraction sets included one Laboratory Duplicate (DUP) sample. The associated sample numbers are Q7071/C12911 (set M748), Q7076/C12921 (set M749), Q9002/C13771 (set M2065), and Q9083/C13781 (set M2075).

Duplicate analyses of sample Q7071/C12911 (set M748) had high Relative Percent Differences for most of the aliphatic analytes due to losses of the original sample

in the extraction lab. Re-extraction could not be initiated because of limited sample size; those data are not included in the tables.

Duplicate analyses of sample Q7076/C12921 (set M749) had high RPDs for C19-alkanes (49%). In the duplicate analyses of sample Q9002/C13771 (set M2065) RPDs could not be calculated for the aliphatic analytes because most target analytes were either not detected or fell below the MDL. Duplicate analyses of sample Q9083/C13781 (set M2075) had RPDs for the aliphatics that were within QC acceptance criteria for all target analytes.

RPDs could not be calculated for the PAH and Pesticide/PCB analytes because most target analytes were either not detected or fell below the MDL. RPDs outside the QC acceptance criteria are flagged with a "Q" in the data tables.

E. Matrix Spikes

Each of the four extraction sets included one Matrix Spike (MS) sample. The associated sample numbers are Q7070/C12911 (set M748), Q7075/C12921 (set M749), Q9001/C13771 (set M2065), and Q9082/C13781 (set M2075).

Sample Q7070 (set M748) had an average percent recovery of 115% for the Aliphatics, 85% for the PAHs, and 97% for the Pesticide/PCB analytes. Sample Q7075 (set M749) had an average percent recovery of 121% for the Aliphatics, 78% for the PAHs, and 81% for the Pesticide/PCB analytes.

Sample Q9001 (set M2065) had an average percent recovery of 98% for the Aliphatics, 85% for the PAHs, and 89% for the Pesticide/PCBs. Sample Q9082 (set M2075) had an average percent recovery of 74% for the Aliphatics, 80% for the PAHs, and 105% for the Pesticide/PCBs.

Individual analytes with recoveries outside the target range are flagged with a "Q" in the data tables.

F. Laboratory Blank Spikes

Two of the four extraction sets included one Laboratory Blank Spike (LBS) sample. The associated sample numbers are Q9004 (set M2065) and Q99085 (set M2075).

Sample Q9004 (set M2065) had an average percent recovery of 99% for the Aliphatics, 83% for the PAHs, and 92% for the Pesticide/PCB analytes. Q99085 (set M2075) had an average percent recovery of 96% for the Aliphatics, 86% for the PAHs, and 104% for the Pesticide/PCB analytes.

Individual analytes with recoveries outside the target range are flagged with a "Q" in the data tables.

G. SRM Samples

Two of the four extraction sets included one aliquot of Standard Reference Material (SRM) 1941. The associated sample numbers are Q7067 (set M748) and Q7072 (set M749).

Concentrations of the target analytes measured in the two SRM samples are tabulated in the Quality Control section of this report. Certified concentrations are not available for most of the target analytes, therefore the results from these analyses are considered advisory only.

H. Analytical Difficulties

Other than the unusually high surrogate recoveries discussed above, no analytical difficulties were encountered with these analyses.

V. ANALYSIS of TISSUES for DIOXINS, FURANS and COPLANAR PCBs

A. Extraction

A total of eleven tissue and twenty sediment samples were extracted in four analytical QC batches designated DX0170 (11 tissues), DX0173 (7 sediments), DX0180 (7 sediments) and DX0183 (6 sediments). No significant analytical difficulties were reported during the extraction procedures. All sample extracts were analyzed for the seventeen dioxin/furan target analytes and the three coplanar-PCB analytes.

B. Surrogate Recoveries

All dioxin/furan and coplanar-PCB surrogate recoveries were within QC acceptance criteria in the eleven tissue samples extracted and analyzed. Six of the twenty sediments analyzed had one or more dioxin/furan or coplanar-PCB surrogate recoveries outside the QC acceptance criteria. Because of the limited availability of additional sample, re-extraction was not initiated.

Recoveries outside the QC acceptance criteria are flagged with a "Q" in the data tables.

C. Laboratory Blanks

Each of the four extraction sets included one Laboratory Blank (BLANK) sample. The associated sample numbers are Q9071 (set DX0170), Q11192 (set DX0173), Q10021 (set DX0180), and Q10054 (set DX0183).

None of the target analytes were detected in the Laboratory Blanks at concentrations greater than three times the MDL.

D. Laboratory Duplicates

Each of the four extraction sets included one Laboratory Duplicate (DUP) sample. The associated sample numbers are Q9073/C11962 (set DX0170), Q11196/C12911 (set DX0173), Q10022/C16684 (set DX0180), and Q10055/C16718 (set DX0183).

RPDs could not be calculated for dioxin/furan and coplanar-PCB analytes because most target analytes were either not detected or fell below the MDL.

E. Matrix Spikes

Each of the four extraction sets included one Matrix Spike (MS) sample. The associated sample numbers are Q9072/C11962 (set DX0170), Q11194/C12911 (set DX0173), Q10024/C16684 (set DX0180), and Q10057/C16718 (set DX0183).

The recoveries of the coplanar-PCB analytes in the tissue and sediment MS samples were all within QC acceptance criteria. Tissue MS sample Q9072 (set DX0170) had high recoveries for four dioxin/furan target analytes and sediment MS sample Q11194 had high recoveries for one dioxin/furan target analyte. All other dioxin/furan analytes had recoveries within the QC acceptance criteria in the tissue and sediment MS samples.

Individual analytes with recoveries outside the target range are flagged with a "Q" in the data tables.

F. Laboratory Blank Spikes

Each of the four extraction sets included one Laboratory Blank Spike (LBS) sample. The associated sample numbers are Q9074 (set DX0170), Q11195 (set DX0173), Q10026 (set DX0180), and Q10058 (set DX0183).

Laboratory Blank Spike sample Q11195 had high recoveries for two dioxin/furan target analytes. All other dioxin/furan and coplanar-PCB analytes had recoveries within the QC acceptance criteria in the LBS samples.

Individual analytes with recoveries outside the target range are flagged with a "Q" in the data tables.

G. SRM Samples

Two of the four extraction sets included one aliquot of Standard Reference Material (SRM) 1941. The associated sample numbers are Q7067 (set M748) and Q7072 (set M749).

Concentrations of the target analytes measured in the two SRM samples are tabulated in the Quality Control section of this report. Certified concentrations are not available for any of the target analytes, therefore the results from these analyses are considered advisory only.

H. Analytical Difficulties

Other than the outliers discussed above, no analytical difficulties were encountered with these analyses.

VI. ANALYSIS of TISSUES and SEDIMENTS for TRACE METALS

A. Analysis Request

Twenty tissue samples and forty-three sediment samples were transferred to the Trace Element Research Lab (TERL) at Texas A&M University for analysis of the nineteen requested trace metal analytes. TERL results for all analytical and Quality Control samples are tabulated at the end of this data package.

B. Laboratory Blanks

Three Laboratory Blanks (designators BLK5B001, BLK5B002, and BLK5B003) were digested and analyzed with the twenty tissue samples. Three Laboratory Blanks (designators BLK-001, BLK-002, and BLK-003) were digested and analysed with the forty-three sediment samples. None of the target analytes were detected in the six Laboratory Blank samples at concentrations greater than the MDL.

C. Laboratory Duplicates

One tissue sample, C11955, was digested and analyzed in duplicate. One analyte, manganese, had a RPD of 67%. Otherwise all target analytes had RPDs below 30%. Two other tissue samples, C17716 and C11949, were analyzed in duplicate for mercury. The concentration of mercury in sample C17716 was below the MDL and no RPD could be calculated. The RPD for mercury in sample C11949 was 0%.

Three sediment samples, C12906, C13771, and C16732, were digested and analyzed in duplicate. All analytes with concentrations greater than three times the MDL had RPDs below 30%. One sample, C12915, was analyzed in duplicate for mercury with a RPD of 0%.

D. Matrix Spikes

One tissue sample, C11962, was digested and analyzed as a MS/MSD pair. All analyte recoveries fell between 80% and 109%. All RPDs were 12% or less. Sample C17719 was analyzed as a MS/MSD pair for mercury. Percent recoveries were 76% and 58%, respectively.

Three sediment samples, C12906, C13771, and C16732, were digested and analyzed as MS samples. All analyte recoveries fell between 91% and 118%. Sample C12916 was analyzed as a MS sample for mercury with a percent recovery of 93%.

E. Laboratory Blank Spikes

Three LBS samples (designators BS5B001, BS5B002, and BS5B003) were digested and analyzed with the tissue samples. All analyte recoveries were within QC acceptance criteria.

Three LBS samples (designators BS-001, BS-002, and BS-003) were digested and analyzed with the sediment samples. All analyte recoveries were within QC acceptance criteria.

F. Standard Reference Materials

Three aliquots of Standard Reference Material (SRM) DORM-2 NRCC were digested and analyzed with the tissue samples. Two aliquots of SRM DORM-1 NRCC were analyzed for mercury. All analyte recoveries were within QC acceptance criteria.

Three aliquots of SRM MESS-2 NRCC were digested and analyzed with the sediment samples. Recoveries for aluminum, barium, beryllium, vanadium, boron, molybdenum, and selenium fell below 65%. All other analyte recoveries were acceptable.

This data package is certified to be in compliance with the terms and conditions of the project QAPP, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hard copy data has been authorized by the management of GERG as verified by the following signatures:
